

Access-Control Brief

VERIFY THE WORK ORDER, NOT THE UNIFORM

EXECUTIVE SUMMARY

Commercial clothing, badges, scanners, and service language can reproduce the appearance of legitimate authority. Presented credentials should support trust, not create it.

CONTROL MATRIX // PUBLIC BASELINE

FAILURE VECTOR	VISIBLE INDICATOR	MINIMUM CONTROL
False work order	Record exists only on visitor device.	Generate and verify the order inside the property system.
Borrowed identity	Badge data cannot be confirmed by known dispatch.	Confirm vendor and individual through an independent contact.
Urgency pressure	Visitor discourages calls or demands immediate entry.	Provide a refusal path and escalate without confrontation.
Venue ambiguity	No single authority owns exits, vendors, and shutdown.	Name one stop-operations lead before public opening.

DECISION AUTHORITY

One named person must be able to deny entry or stop operations without seeking approval from the visitor.

PUBLIC DISTRIBUTION // NO CLIENT OPERATIONS DISCLOSED

This note is public educational material and does not disclose client operations, active deployments, or a contracted security assessment.
